

“Out-of-the-Box” BI for Dynamics 365 NAV/Business Central

Today, business leaders identify your company’s data and analytical capabilities as one of the most important **assets** to survive in an increasingly competitive world. The right information at the right time is key in making decisions, from strategic to operational level.

“Often companies have a tough time to get the right Business insights after a Microsoft Dynamics NAV / Business Central ERP implementation.”

There is even a burden to get your core figures right!

As a consequence, people lose confidence in spreadsheet-based reporting, hesitate to act on data and are disappointed with the investment made in the ERP system. Finally, your company risks ending-up in what we could call a ‘disconnected report culture’ of manually produced Excel spreadsheets.

Is your company also struggling in making such **informed decisions based on your data, despite investments made in Microsoft Dynamics NAV / Business Central** ?

Time to act !

At element61, we have the DNA to understand your aspirations and challenges regarding **business analytics**. Putting together our know-how and experience in deploying Business Intelligence at numerous Microsoft Dynamics BC/NAV customers, we developed BC/NAV BI “Out-of-the-Box”. BC/NAV BI “Out-of-the-Box” is a **pre-packaged Business Intelligence solution** -based on Business Central / Navision as a source- covering all your most important figures, analysis, dashboards and reports!

Insights at a glance

Business Central / NAV Power BI “Out-of-the-Box” provides dozens of viewpoints on your business data.

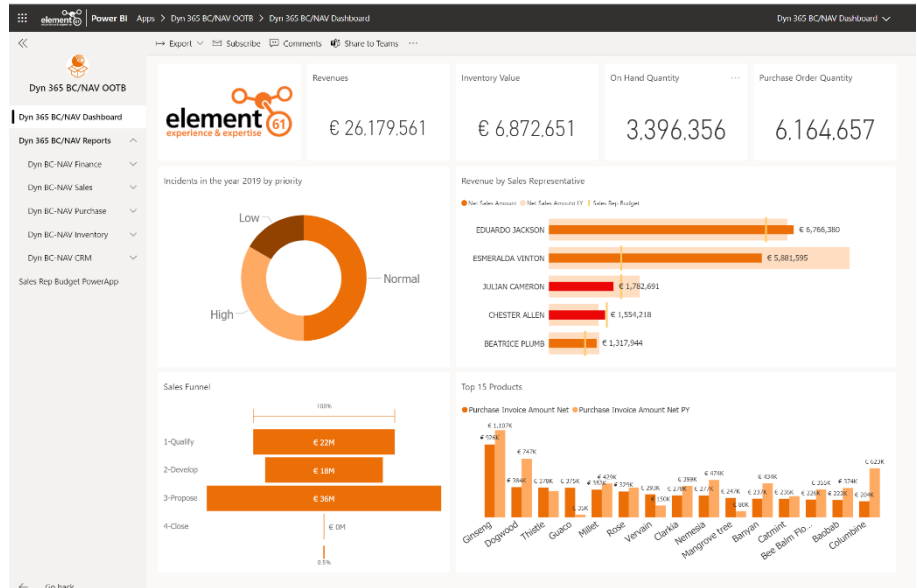

- **Sales analytics** Get instant answers on questions like:
‘Which top 10% customers are key to my success in terms of contribution? What is their back-order rate?’
‘Which product categories have a major increase in turnover?’
- From a **Financial perspective** :
‘Is my working capital where I expect it is? In my stock, creditors? Debtors?’ *‘Which cost centers will exceed their budget? Which costs are involved on a consolidated or company level?’*

- A **Supply Chain** and **Purchase** manager could find out:
'What are my slow moving products, what was their production or purchase history? What is the price evolution of my raw materials? Is this trend vendor-independent or not?'

The possibilities are end-less. You will experience that the answer on one question triggers other questions, until you have a profound understanding of all your business data!

Power BI "Out-of-the-Box" Benefits

- **Pre-packaged solution**
Covering the domains of Sales, CRM, Purchase, Finance, Inventory, Timesheets, Service and Production, for all BC/NAV versions (even different source versions can be combined)
- **Agile**
Achieve insights on day one, and enjoy fast improvement cycles
- **No burden on IT**
IT keeps control of the back-end, while your company enjoys both corporate and self-service BI
- **Reduced risk**
Open for customization, scalable and stable due to proven technology and best practices
- **Access**
Insights made accessible through PCs, tablets and smartphones
- **Version neutrality**
The solution can access and combine data from different Business Central/NAV source system versions and can deliver the Business Intelligence in SQL Server 2008, 2012, 2014, 2016, 2017, 2019 or in the Azure Cloud.
- **BI for all users**
Data becomes available in cubes (Analysis Services), for reporting (Reporting Services) and for Self-service and Mobile BI (PowerBI).
